Wortec Harmonic Sound Pulse Reduction

Press release 19/11/2012

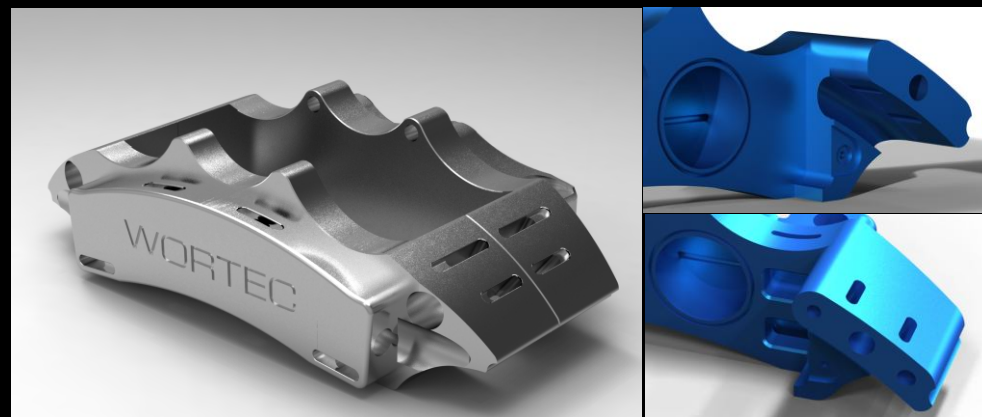

Wortec are proud to announce the release of “WHiSPeR” for our performance brake systems

The new design technology, “wortec harmonic sound pulse reduction” or to give it its short name “WHiSPeR” reduces the noise generated from drilled performance brake rotors.

This hum or drone is common, although not a performance reducer, it is undesirable on a road car. “WHiSPeR” reduces this effect and enhances the driver experience.

Wortec have a successful track record of producing products for performance cars and its recently released modular brake systems has given the customer a huge range of options, with 4, 6, 8 and 12 piston calipers fitted to rotors up to 410mm and combined with a choice of 4 pad compounds and “WHiSPeR” will be added to all 2013 brake calipers.
